Data + Out-of-School Time Partnerships = Student Success

When people picture learning, most think of a classroom. But learning doesn't stop at 3 p.m. When out-of-school time (OST) partners and schools work together and share information, students excel. OST can include tutoring, community activities, internships, and more—each a source of trusted adults who are important partners in students' education journeys. Here's a look at how secure, strategic data sharing helps OST partners and schools drive positive change for students.

Caleb's math teacher sees that he's having trouble with fractions. She arranges a conversation with his parents and the tutor from his afterschool program. Together, they review his data.

With access to Caleb's math homework and test scores, his afterschool tutor can now tailor their activities together to help him catch up.

IN THE COMMUNITY

When school leaders see consistent attendance issues with a middle school student like Joey, they can coordinate with his parents or guardians and OST program leaders to help.

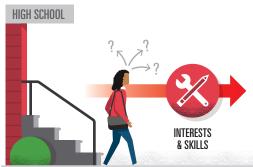

Information about Joey enables community program leaders to talk with Joey and his family about the supports that could help him get to school every day.

HIGH SCHOOL

IN THE WORKPLACE

Based on Maria's interests, skills, and goals, she is paired with a summer internship that aligns with what she's learning in school and builds skills she needs for her future.

When schools share information like the types of courses students take and the skills they want to develop, their workforce OST partners can tailor programming to best serve all students.
